PROFILE

Senior Data Engineer with 9+ years overall experience building and managing enterprise-scale data platforms.

Expert in Unity Catalog, Data Medallion frameworks, Python/SQL/Spark ETL, and integration workflows, with strong experience in Azure cloud infrastructure and Terraform. Skilled in cluster management, user permissions, and external Python package development, DevOps, contanerization and version control.

SKILLS

TECHNICALL SKILLS

Azure | IaC | Databricks | Snowflake | Data Factory | ETL | ELT | Spark | Python | SQL | Delta Lake | Tableau | Power BI| DAX | Terraform | GitHub |CI/CD | DevOps | Docker | LLMs | RAG |FastAPI | HTML | CSS

ANALYTICAL SKILLS

Data Profiling | KPI/Statistical Analysis | Performance Optimization | SQL Analytics | Data Modeling | Root Cause Analysis | Data Validation | Data Quality Assessment

PERSONAL SKILLS

Attention to Detail | Problem Solving | Teamwork and Collaboration | Adaptability and Quick Learning | Critical Thinking | Ownership and Accountability

HOBBIES

Chess | Outdoor Activities | Exotic Animals | Botany | Swimming | Football | Forest Hiking

PROFESSIONAL EXPERIENCE

Senior Data Engineer | ***@Cencora*** | Bern, Switzerland | Mar 2024 – Present

- Manage full Databricks platform: Azure infrastructure, Unity Catalog, Medallion architecture, cluster configuration, governance, permissions, and jobs/notebooks.
- Ingest data from Databricks into Snowflake and build datamarts for reporting.
- Build CDF/CDC pipelines and high-performance ETL workflows with Python/Spark, processing TBs/day. Implement optimization techniques – z-ordering, partitioning.
- Develop custom Python connectors for external SFTP sources and Logic App workflows for ingestion from Microsoft sources (Outlook, SharePoint). Reduced manual work by 90%.
- Perform and support data migrations across platforms.
- Maintain Azure infrastructure via Terraform (vnet, subnets, firewalls, Functions/Logic Apps). **Link to platform management configuration in projects section below**.
- Maintain several GitHub repositories and enforced development strategies to manage concurrent feature development. API and Asset Bundles deployments.
- Build GitHub Actions / CI/CD to enforce PR strategies and implement checks.

Senior Data Engineer | ***@The Coca Cola Company*** | Bulgaria | Jun 2022 – Dec 2023

- Developed, maintained and enhanced the bottler data ingestion platform, built on Synapse, Data Factory, Databricks.
- Designed Python/Spark ingestion frameworks to manage incremental and full data processing.
- Implemented quality checks, unit and integration tests to ensure data accuracy.
- Managed partition strategies to optimize reporting layer updates.
- Supported the Azure infrastructure maintenance and deployment across multiple environments.

Data Analyst | ***@Amazon*** | Luxembourg | Aug 2020 – Dec 2021

- Managed team's data feed from Redshift and external sources to team's storage.
- Automated reporting in Power BI/Tableau, reducing manual work by 90%.
- Designed Python-based apps to support budgeting and generate KPIs, improving accuracy and speed by 50%.
- Supposed teams with automation initiatives and knowledge sharing.
- Designed dashboards supporting operational decision-making.

FP&A Analyst | ***@TIP Trailer Services*** | Amsterdam | Jan 2017 – Aug 2020

- Designed budgeting and forecasting model frameworks used by the legal entities.
- Automated calculations of cost and revenue based on input parameters, reducing manual work by 90%, providing scalability and accuracy.
- Created Python and VBA based applications for replication of models, reconciliations and KPI analyses.
- Managed the data migration from the models to the database, ensuring accuracy and timeliness.
- Created management reports, comparison and trend analyses, enabling data-driven decision making.
- Provided programming training and knowledge sharing to team members, mentored junior analysts.

EXTRACURRICULAR ACTIVITIES

Caerus Capital Investment Group

- Cofounded the investment group with fellow students from RSM
- Competed in the BnR Beurs Investment Competition challenge
- Over the span of 9 months, we invested in the major asset types – equity, bonds and commodities
- Finished the competition on 2nd place with a net profit of 9.87%

GITHUB PROJECTS

Databricks Platform Management / LogicApp Ingestion IaC

A complete terraform based configuration of Databricks platform environment built on Azure, including LogicApp IaC setup for file ingestion. The architecture features private network, access management through private connectivity, and cluster configuration. Skills: *Azure, Terraform, Databricks*

https://github.com/filip-dev-portfolio/databricks-IaC, *https://github.com/filip-dev-portfolio/file-ingestion-IaC*

Trading Platform

Based on ticker input, the app will retrieve the historical data for the given period, it will run tests, it will calculate analytics and will make price predictions based on linear regression. The result is exposed to API. Skills: *Python, OOP, Predictive Analytics, API*

https://github.com/filip-dev-portfolio/trading-platform

PDF Tutor – Local RAG & LLM Application

A local AI-powered application that enables users to query PDF textbooks and receive context-grounded answers with source-page references. Implements a complete RAG pipeline using semantic embeddings, FAISS vector search, and a locally hosted Qwen3 8B LLM via Ollama. Supports PDF ingestion, text chunking, persistent vector storage, and an interactive Streamlit interface, keeping document processing and inference local. **Skills:** *Python, RAG, LLMs, Ollama, Qwen3, FAISS, Streamlit, PyMuPDF, NumPy, pytest.*

https://github.com/filip-dev-portfolio/textbook-pdf-tutor

CV Matcher GenAI Project – LLM and Docker

A complete FasAPI application that compares CVs against job descriptions. Generates AI-based match score and recommendations and keeps data processing local. Uses locally hosted Qwen3 LLM via Ollama. Skills*: Python, FastAPI, Docker, Ollama, Qwen3 LLMs, REST APIs*

https://github.com/filip-dev-portfolio/cv-analysis

EDUCATION

Master's Degree, Finance and Investments

Rotterdam School of Management, Erasmus University | 2016 - 2017

- Program focused on risk management, investments and valuation
- R, Stata and MATLAB were learnt and used throughout the program.
- My master thesis was a multi-page research paper analysing the effects of loan availability on small and medium size enterprises (https://thesis.eur.nl/pub/40280).

Bachelor's degree, Economics and Business Economics

University of Groningen | 2013 - 2016

- Program focused on derivatives and integral math, economics and business.
- I wrote multiple research papers on finance/economics related topics, applying multiple/linear/logistic regressions.
- R, Stata and MATLAB were taught and used.

CERTIFICATES

- **AZ-900** Azure Fundamentals – Cloud literacy and Azure concepts.
- **Terraform Associate 003** – foundational Infrastructure as Code skills, state management, modules, provisioners and debugging.
- (In Progress) **AZ-700** Azure Network Engineer Associate – networking, connectivity, security, access.
- (In Progress) **Databricks Certified Data Engineer Professional** – design, build, optimize production-grade data pipelines
